Hong Kong ▪ +852 8491-1182 ▪ sunnyjzchen@gmail.com ▪ linkedin.com/in/jiazhen-sunny-chen

I will help reshape industrial and new energy markets. Combining chemistry research, industrial sales and entrepreneurship, I translate technical capabilities into market value, finding customers and applications that bring innovation from the laboratory into industry.

EDUCATION

THE UNIVERSITY OF HONG KONG, HKU BUSINESS SCHOOL

Master of Science in Marketing

Award: Dean's Scholarship (Top 1%)

HONG KONG

Sep 2026–May 2027 (Expected)

NANKAI UNIVERSITY, COLLEGE OF CHEMISTRY

Bachelor of Applied Chemistry

Award: University-level Outstanding Graduate (Top 8%)

TIANJIN, CHINA

Sep 2022–Jun 2026

SELECTED PROFESSIONAL EXPERIENCE

TENCENT

Advertising Marketing Management Trainee

Developed an understanding of restaurant advertisers across business sizes and growth stages, connecting digital advertising with physical-store operations while strengthening needs analysis, solution selling and key-account management.

- Used client-performance analysis and category benchmarks to develop a Domino's campaign proposal, helping increase campaign budget by 20%.
- Translated customer issues into product requirements and coordinated internal resources for client testing and campaign delivery.

BEIJING

May–Sep 2025

SIEMENS

Industrial Sales and Business Development Intern

Gained insight into industrial customer needs and purchasing processes, developed CRM, lead-prioritization and trade-show marketing skills, and confirmed my commitment to a sales career.

- Classified and prioritized CRM leads by industry, application needs and buying stage; the sales team adopted the approach for follow-up.
- Supported product displays, exhibition materials and lead collection, learning to connect technical specifications with industrial applications.

BEIJING

Jun–Oct 2023

TECHNOLOGY COMMERCIALIZATION AND RESEARCH

OXYGEN QINGSHAN

Co-founder, Marketing and Business Development

Led market validation and external partnerships for a controlled-release chlorine-dioxide produce-preservation product.

- Visited farms, logistics companies and agricultural institutions across nine locations in seven provinces to assess spoilage, transport conditions and purchasing needs.
- Developed direct-to-farm and logistics-partner approaches; translated preservation technology into customer value and prepared commercial pitches.
- Helped secure approximately RMB 1 million in bank credit facilities and project funding through engagement with banks, government and industry partners.

TIANJIN

Oct 2023–Sep 2026

HIGH-VOLTAGE SODIUM-METAL BATTERY ELECTROLYTES

Undergraduate Thesis

Independently investigated electrolyte formulations, connecting composition, electrochemical performance and interface characterization.

- Designed a DEGDME-based multi-salt electrolyte; the selected formulation achieved an oxidation window above 5.0 V and approximately 750 hours of symmetric-cell cycling versus 190 hours for the reference.
- Used Raman, LSV, CV, SEM and XPS to interpret performance and interface differences; completed data analysis and thesis writing.

TIANJIN

Nankai University

MENGNIU SELF-HEATING MILK

Product Innovation Project

Applied chemistry to a winter-use consumer product concept and marketing proposal; national top-ten finalist.

- Designed the internal heating structure and translated its function into consumer benefits, campus pop-up plans and rural donation campaigns.

Sep–Dec 2024

SKILLS AND LANGUAGES

Technical value communication, B2B field research, CRM, trade shows, electrochemical testing, Excel, PowerPoint, Origin; Mandarin (native), English (IELTS 6.0).
